

## BARR 500

Dear Customer,

We are glad to inform you that, starting from this month, our barriers BARR500 are equipped with the new control unit BR24, designed following the rules of the highest reliability and easiness of use.

The **BR24** has all the functions necessary to be used on our automatic barriers, in particular:

- Separate inputs for: Open/close/Start/Stop
- Possibility of managing a traffic light (green/red) at one or two ways.
- Direct input of boom lights (*the control unit for the management of boom lights, code AS05200, is not necessary any more*).
- New management system for adjustable decelerations with 4 different logics to obtain the best result.
- It allows an intensive use thanks to its special hardware.

The **BR24** is GIBIDI answer to the requests of its valued partners.

If you need more information, please visit the Installers Area of our web site or contact our Export Dpt.

GIBIDI grows up and gets better with you, GIBIDI: Automatically yours.
