

## BA230

## BA24

Dear Customer,

We are glad to inform you that GIBIDI, attentive to the requests of its customers, during last months has worked out a new firmware for its digital control units BA230 and BA24. In particular we have improved the programming logic, that does not allow to enable or disable some unintentional functions, but allows to choose by a password the access to a simplified MENU for easy installations, or to a complete MENU for cutting-edge installations. We have also added some interesting facilities, as the management of the adjustable acceleration ramp and much more.

Please consider that we have changed our purchasing codes only to make our organization easier; therefore, starting from the 1st June, you should use the following codes:

- **Control unit BA 230 - code: AS05580**
- **Control unit BA 24 - code: AS05590**

All the kits including them have been updated. The new control units, will be easily recognizable by their code and the highlighting label "NEW FIRMWARE". You can download the updated manual on our website right from today.

For any information, do not hesitate to contact us at the following number 00390386522052 or email: [comm@gibidi.com](mailto:comm@gibidi.com)

*GIBIDI grows up and gets better with you.*

Best Regards
